How to get waad Token APP 2 APP

All the api are protected with JWT token, to obtain the token you have to use api of Microsoft oauth2 app authentication.
I added a link explaining how to get the token
https://docs.microsoft.com/en-us/azure/active-directory/develop/v2-oauth2-client-creds-grant-flow#get-a-token

When you obtain this token you can call our api safely by adding the header:
Header Name: “Authorization”
Header Value: “Bearer eyJ….”

In c# the code is like this

```
HttpClient client = new HttpClient();
AuthenticationContext _clientCtx =
        new AuthenticationContext("https://login.microsoftonline.com/" + tenantId + "/");

AuthenticationResult ar = await _clientCtx.AcquireTokenAsync(_scope, new
ClientCredential(_clientId, _clientSecret));
String accessToken = ar?.AccessToken;
client.DefaultRequestHeaders.Authorization = new AuthenticationHeaderValue("Bearer",
accessToken);
```

This library does this HTTP call:

METHOD: POST
URL: https://login.microsoftonline.com/PUT_HERE_THE_TENANTID/oauth2/v2.0/token
HEADER: Content-Type: application/x-www-form-urlencoded
BODY: grant_type=client_credentials&client_id=PUT_HERE_THE_CLIENT_ID&scope=PUT_HERE_THE_SCOPE.default&client_secret=PUT_HERE_THE_SECRET_KEY

RESPONSE:
{"token_type":"Bearer","expires_in":3600,"ext_expires_in":3600,"access_token":"eyJ.."}
